# Email Thread Summarization Tool - Setup Guide

## Prerequisites

- Python 3.8 or higher
- pip (Python package manager)
- Internet connection (for downloading models)

## Installation Instructions

### Step 1: Create a Virtual Environment (Recommended)

```
python -m venv email_summarizer_env

.\email_summarizer_env\Scripts\activate
```

### Step 2: Install Required Packages

```
pip install transformers torch streamlit
```

### Step 3:

### Running the Applications

### Option 1: Tkinter Desktop Application

```
python email_summarizer_tkinter.py
```

**Features:**

- Native desktop
- GUI Offline capability (after model download)
- Progress indicators
- Sample email for testing
- Clear and intuitive interface

**Option 2: Streamlit Web Application**

```
streamlit run email_summarizer_streamlit.py
```

**Features:**

- Modern web interface
- Automatic model caching
- Statistics and metrics
- Responsive design
- Rich formatting

**System Requirements**

- Minimum RAM: 4 GB (8 GB recommended)
- Disk Space: ~2 GB for model storage
- CPU: Any modern processor (GPU optional but faster)

**Usage Tips**

**Input Email Format**

**The tool accepts various email formats:**

- Complete email with headers
- Email body only
- Forwarded messages
- Email threads

**Optimal Performance**

- Emails between 100-1000 words work best
- Remove unnecessary attachments info

**The tool automatically handles:**

- Email signatures
- Quoted replies
- Headers (From, To, Date, etc.)
